

# Semaglutide

GLP-1 Receptor Agonist

Proven Weight Loss | Blood Sugar Control | Heart Health

## WHAT IS SEMAGLUTIDE?

Semaglutide is a GLP-1 (glucagon-like peptide-1) receptor agonist that has transformed the landscape of weight management and metabolic medicine. Originally developed for Type 2 diabetes (Ozempic), semaglutide at higher doses (Wegovy) produces clinically significant weight loss. Clinical trials demonstrated an average weight loss of 14-15% of total body weight — far exceeding previous non-surgical options. It is one of the most studied medications in metabolic medicine with a robust safety record.

## KEY BENEFITS

- Clinically proven 14-15% average total body weight loss
- Reduces appetite and hunger signals from the brain
- Improves blood sugar control — beneficial for pre-diabetics and diabetics
- Reduces cardiovascular risk — 20% reduction in heart attack/stroke risk
- Lowers blood pressure and improves cholesterol markers
- Reduces liver fat (non-alcoholic fatty liver disease)
- Convenient once-weekly injection
- Well-established safety profile with years of clinical data

## HOW IT WORKS

Semaglutide mimics the natural GLP-1 hormone released after eating. It slows gastric emptying (you feel full longer), reduces appetite signals in the brain's hypothalamus, and stimulates insulin secretion in response to elevated blood sugar. This multi-pronged approach creates a powerful metabolic shift — patients naturally eat less, make better food choices, and lose weight steadily over time.

## WHY IT'S PAIRED WITH THE BODY REPAIR PACKAGE

The Body Repair Package (BPC-157, TB-500, MOTS-C) was specifically designed to enhance results for GLP-1 patients. MOTS-C prevents the muscle loss that often accompanies caloric restriction on GLP-1 therapy. BPC-157 and TB-500 support connective tissue and gut health — directly addressing two common GLP-1 side effects: GI discomfort and fatigue. The combination delivers a complete metabolic transformation.

## FAST FACTS

<b>Class</b> GLP-1 Receptor Agonist	<b>Average Weight Loss</b> 14-15% body weight
<b>Administration</b> Weekly subcutaneous injection	<b>Typical Duration</b> 3-month starter protocol

## PRICING

---

<b>Semaglutide Only — 3 Month Supply</b>	<b>\$605</b>
<b>Semaglutide + Body Repair Package — 3 Months</b> <i>Includes BPC-157, TB-500 &amp; MOTS-C</i>	<b>\$1,425</b>
